

WHAT IS CLAIMED IS:

1 1. A wireless communication device capable of accessing a
2 wireless network and downloading a software upgrade file therefrom,
3 said wireless communication device comprising:

4 a first central processing unit (CPU) capable of
5 controlling wireless communications with said wireless network;

6 a first memory associated with said first CPU;

7 a second central processing unit (CPU) capable of
8 executing at least one end-user application on said wireless
9 communication device; and

10 a second memory associated with said second CPU,
11 wherein said first CPU downloads said software upgrade file from
12 said wireless network and stores said downloaded software upgrade
13 file in said second memory.

1 2. The wireless communication device as set forth in Claim 1
2 wherein said first CPU is capable of executing a first upgrade
3 agent program that replaces first existing code associated with a
4 first existing software file in said first memory with first
5 replacement code from said downloaded software upgrade file.

1 3. The wireless communication device as set forth in Claim 2
2 wherein said first upgrade agent program is stored in said first
3 memory.

1 4. The wireless communication device as set forth in Claim 3
2 wherein said downloaded software upgrade file is transferred from
3 said second memory to said first memory by an interprocessor
4 communication unit.

1 5. The wireless communication device as set forth in Claim 4
2 wherein said first CPU executes said first upgrade agent program
3 after said downloaded software upgrade file is transferred into
4 said first memory from said second memory.

1 6. The wireless communication device as set forth in Claim 3
2 wherein said first upgrade agent program is transferred from said
3 second memory and stored in said first memory.

1 7. The wireless communication device as set forth in Claim 6
2 wherein said downloaded software upgrade file and said first
3 upgrade agent program are transferred from said second memory to
4 said first memory by an interprocessor communication unit.

1 8. The wireless communication device as set forth in Claim 7
2 wherein said first CPU executes said first upgrade agent program
3 after said downloaded software upgrade file is transferred into
4 said first memory from said second memory.

1 9. The wireless communication device as set forth in Claim 2
2 wherein said second CPU is capable of executing a second upgrade
3 agent program that replaces second existing code associated with a
4 second existing software file in said second memory with second
5 replacement code from said downloaded software upgrade file.

1 10. The wireless communication device as set forth in Claim 9
2 wherein said second upgrade agent program is stored in said second
3 memory.

1 11. The wireless communication device as set forth in Claim
2 10 wherein said second upgrade agent program is transferred from
3 said first memory and stored in said second memory.

1 12. The wireless communication device as set forth in Claim
2 11 wherein said second CPU executes said second upgrade agent
3 program after said second upgrade agent program is transferred into
4 said second memory from said first memory.

1 13. A method of upgrading software in a wireless
2 communication device comprising: 1) a first CPU that controls
3 wireless communications with the wireless network; 2) a first
4 memory associated with the first CPU; 3) a second CPU that executes
5 at least one end-user application; and 4) a second memory
6 associated with the second CPU, the method of upgrading software
7 comprising the steps of:

8 accessing a wireless network using the first CPU;

9 downloading the software upgrade file from the wireless
10 network using the first CPU; and

11 transferring the downloaded software upgrade file from
12 the first CPU into the second memory.

1 14. The method as set forth in Claim 13 further comprising
2 the step of executing in the first CPU a first upgrade agent
3 program that replaces first existing code associated with a first
4 existing software file in the first memory with first replacement
5 code from the downloaded software upgrade file.

1 15. The method as set forth in Claim 14 wherein the first
2 upgrade agent program is stored in the first memory.

1 16. The method as set forth in Claim 15 further comprising
2 the step of transferring the downloaded software upgrade file from
3 the second memory to the first memory.

1 17. The method as set forth in Claim 16 wherein the first CPU
2 executes the first upgrade agent program after the downloaded
3 software upgrade file is transferred into the first memory from the
4 second memory.

1 18. The method as set forth in Claim 15 further comprising
2 the step of transferring the first upgrade agent program from the
3 second memory into the first memory.

1 19. The method as set forth in Claim 18 further comprising
2 the step of transferring the downloaded software upgrade file from
3 the second memory to the first memory.

1 20. The method as set forth in Claim 19 wherein the first CPU
2 executes the first upgrade agent program after the downloaded
3 software upgrade file is transferred into the first memory from the
4 second memory.

1 21. The method as set forth in Claim 14 further comprising
 2 the step of executing in the second CPU a second upgrade agent
 3 program that replaces second existing code associated with a second
 4 existing software file in the second memory with second replacement
 5 code from the downloaded software upgrade file.

1 22. The method as set forth in Claim 21 wherein the second
 2 upgrade agent program is stored in the second memory.

1 23. The method as set forth in Claim 22 further comprising
 2 the step of transferring the second upgrade agent program from the
 3 first memory into the second memory.

1 24. The method as set forth in Claim 23 wherein the second
 2 CPU executes the second upgrade agent program after the second
 3 upgrade agent program is transferred into the second memory from
 4 the first memory.
